

FEATURES

- ◆ RoHS compliant
- ◆ Efficiency up to 80%
- ◆ Power density up to 1.33W/cm³
- ◆ Wide temperature performance at full 2 Watt load,-40°C to 85 °C
- ◆ Single and dual output
- ◆ UV 94V-0 package material
- ◆ No heat sink required
- ◆ Industry standard pinout
- ◆ 5V and 12V input
- ◆ 3KVDC isolation (1 minute)
- ◆ 5V,9V,12V and 15V output
- ◆ Internal SMD construction
- ◆ Fully encapsulated with toroidal Magnetics
- ◆ No external components required
- ◆ MTTF up to 4.2 million hours
- ◆ No electrolytic or tantalum capacitors
- ◆ PCB mounting

MODEL SELECTION

|-----------------|----------------|
| ①Product Series | ②Input Voltage |
| ③Output Voltage | ④Fixed Input |
| ⑤SIP7 Package | ⑥Rated Power |

APPLICATIONS

The E_XS-2W&F_XS-2W series of industrial temperature range DC/DC converters,available in industry standard SIP packaging offers a power upgrade path from the _XS-1w&F_XS-1w series. The E_XS-2W&F_XS-2W series offers 3kVDC isolation with 5V output minimum efficiency of 80% at 2W. The unregulated E_XS-2W&F_XS-2W series has superior output voltage set point accuracy of 6% in conjunction with excellent load regulation for this converter type.Unbalanced loading capabilities on dual output variants,all of the rated output power may be drawn from a single output.

SELECTION GUIDE

Order code	Input Voltage (V)	Output Voltage (V)	Output Current (MA)	Input Current (Rated Load) (MA)	Efficiency (%)	Isolation Capacitance (PF)	MTTF ¹ (KHRS)
F0505XS-2W	5	5	400	470	83	28	3998
F0509XS-2W	5	9	222	455	86	36	3718

E1215XS-2W	12	±15	±67	190	87	57	1574

INPUT CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max	Units
Voltage range	Continuous operation,5V input types	4.5	5	5.5	V
	Continuous operation,12V input types	10.8	12	13.2	V
Reflected ripple current			7.5	15	MA

ABSOLUTE MAXIMUM RATINGS

Short-circuit protection ²	1 second
Lead temperature 1.5mm from case for 10 seconds	300°C
Internal power dissipation	550mW
Input voltage VIN,E/F05 types	7V
Input voltage VIN,E/F12 types	15V

1.Calculated using MIL-HDBK-217FN2 calculation model with nominal input voltage at full load.

2.Supply voltage must be disconnected at the end of the short circuit duration.

All specifications typical at TA=25°C,nominal input voltage and rated output current unless otherwise specified.

TECHNICAL NOTES

ISOLATION VOLTAGE

"Hi Pot Test", "Flash Tested", "Withstand Voltage", "Proof Voltage", "Dielectric Withstand Voltage" & "Isolation Test Voltage" are all terms that relate to the same thing, a test voltage. Applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Professional Power Module E_XS-2W&F_XS-2W series of DC/DC converters are all 100% production tested at their stated isolation voltage. This is 3KVDC for 1 minute.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

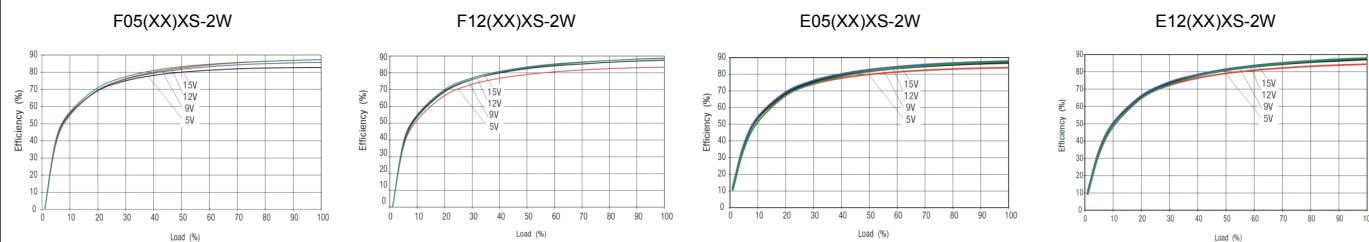

The E_XS-2W&F_XS-2W series has been recognized by Underwriters Laboratory for functional insulation. Both input and output should normally be maintained within SELV limits i.e. Less than 42.4V peak, or 60VDC. The isolation test voltage represents a measure of immunity to transient voltages and the part should never be used as an element of a safety isolation system. The part could be expected to function correctly with several hundred volts offset applied continuously across the isolation barrier, but then the circuitry on both sides of the barrier must be regarded as operating at an unsafe voltage and further isolation/insulation systems must form a barrier between these circuits and any user-missible circuitry according to safety standard requirements.

REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, Construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

This consideration equally applies to agency recognized parts for better than functional isolation where the wire enamel insulation is always supplemented by a further insulation system of physical spacing or barriers.

EFFICIENCY VS LOAD

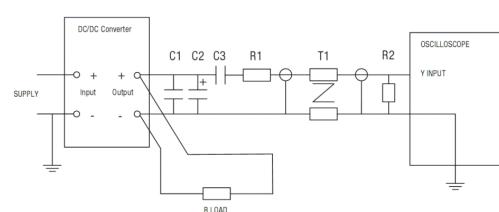

CHARACTERISATION TEST METHODS

Ripple & Noise Characterization Method

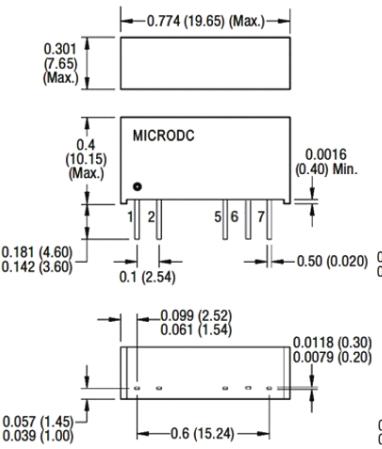

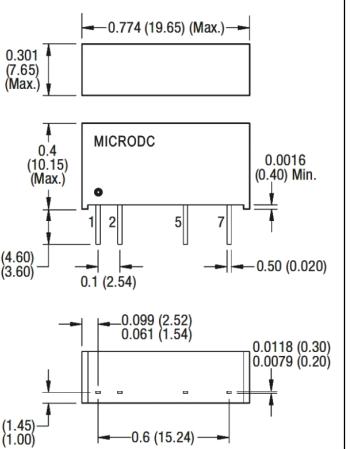

Ripple and noise measurements are performed with the following test configuration.

C1	1uF X7R multilayer ceramic capacitor, voltage rating to be a minimum of 3 times the output voltage of the DC/DC converter
C2	10uF tantalum capacitor, voltage rating to be a minimum of 1.5 times the output voltage of the DC/DC converter with an ESR of less than 100mΩ at 100KHz
C3	100nF multilayer ceramic capacitor, general purpose
R1	450Ω resistor, carbon film, +/-1% tolerance
R2	50Ω BNC termination
T1	3T of the coax cable through a ferrite toroid
RLOAD	Resistive load to the maximum power rating of the DC/DC converter. Connections should be made via twisted wires
Measured values are multiplied by 10 to obtain the specified values.

RECOMMENDED FOOTPRINT DETAILS

TUBE OUTLINE DIMENSIONS

RoHS COMPLIANT INFORMATION

This series is compatible with RoHS soldering systems with a peak wave solder temperature of 300°C for 10 seconds.

The pin termination finish on the SIP package type is Tin Plate, Hot Dipped over Matte Tin with Nickel Preplate. The DIP types are Matte Tin over Nickel Preplate. Both types in this series are backward compatible with Sn/Pb soldering systems.

REACH COMPLIANT INFORMATION

This series has proven that this product does not contain harmful chemicals, it also has harmful chemical substances through the registration, inspection and approval.
